

CREATE · IMPROVE · MAINTAIN

Service for every stage of the lifecycle.

Creating a new process, improving one that underperforms, or maintaining the equipment production depends on — GQI services cover the full equipment lifecycle. Factory-trained people, data-driven recommendations, and responsive support, whether you bought your equipment from us or not.

From first concept through start-up, daily production, and eventual rebuild — one accountable partner for the full life of the installation.

Factory-trained field service, on site

Create

New process consultation and design, equipment selection, factory-trained start-up, commissioning and operator training.

Improve

On-site and virtual process audits, material testing and screening trials, upgrades and retrofits to installed equipment.

Maintain

PM and master service agreements, OEM certified repair, overhauls and rebuilds, quick-ship screens and spares.

Any brand

Ours or not — if it moves dry bulk, GQI will look at it and say honestly whether we can support it.

Services across the lifecycle, one accountable partner

New Process Consultation & Design

The best solutions start with a conversation. We help define throughput, containment, and compliance requirements — then design an equipment lineup that fits the process, from a single machine to a complete line.

Process Evaluation & Optimization

On-site and virtual process audits that assess bottlenecks, capacity gaps, and material-flow inefficiencies — with data-driven, application-specific improvement plans, not generic advice.

Equipment Start-up & Commissioning

Installation, start-up, and commissioning performed by factory-trained personnel — so new equipment enters production correctly, safely, and on schedule.

Preventative Maintenance Programs

Scheduled inspections, adjustments, wear-part replacement, and lubrication built around your production schedule, equipment type, and operating conditions — so downtime is planned, not a surprise.

OEM Certified Service & Repair

On-site diagnosis and repair by factory-trained technicians using OEM parts and procedures — arriving with the tools, expertise, and spares to get the machine back to spec.

Machine Overhauls & Rebuilds

Overhauls, rebuilds, and legacy retrofits that extend the useful life of installed equipment — modernizing what you have instead of forcing a replacement.

Create. Improve. Maintain.

Innovative Solutions. Reliable Support. Always a Step Ahead.

FIELD SERVICE, TESTING & AGREEMENTS

Planned downtime beats the other kind.

Keep running what you rely on

Preventative maintenance keeps coverage predictable and downtime planned — inspections, adjustments, lubrication and wear-part replacement scheduled around production, under PM and master service agreements. The point is that the machine comes out of service when you decide, not when it decides.

OEM certified service and repair

When a machine goes down, the diagnosis matters more than the dispatch. Factory-trained technicians work to OEM procedures with OEM parts, so the repair returns the machine to its original specification rather than just getting it turning again — arriving with the tools, the expertise and the spares the job is likely to need.

Machine overhauls and rebuilds

Worn is not the same as finished. Overhauls and rebuilds strip the machine back, replace what has reached the end of its wear life, and return it to OEM standard. Legacy retrofits extend the same approach to installed equipment the original builder no longer supports — modernizing what you have instead of forcing a replacement.

Optimization grounded in data

Most lines leave capacity on the table. Process evaluations dig into bottlenecks, capacity gaps and material-flow inefficiencies, and come back with application-specific plans. Where the answer is not obvious, material testing and screening trials validate cut points and throughput on your actual product before you commit to a change.

Material testing & screening trials

Rescreening a customer frame in-house

The technical depth of an OEM network, the attentiveness of a local partner

Supported from the Chicago area. Field service experts arrive prepared, whether the job is installation, repair, or system optimization. Not sure where to start? Call, text, or WhatsApp and reach a real person.

Factory-trained technicians · quick-ship parts inventory · responsive local support · any brand — ours or not

Requested together. Service and parts can be scoped in a single request — commissioning, maintenance contracts, optimization, overhaul and refit, on-site repair, and remeshing alongside the spares that go with them. Tell us the machine, the symptoms, and when you need it back.
